

Adequan™

Proven to stimulate cartilage synthesis

And what's more, it's licensed

Degenerative joint disease (DJD) and tendonitis can have a devastating effect on any horse, so getting to the root of the problem in good time is vital to ensure a long and healthy career. Adequan is the *only* licensed product proven to stimulate cartilage synthesis, restore synovial function and relieve pain and inflammation.

Adequan acts fast on affected joints and can be used alongside other drugs such as NSAIDs. In addition, the intra-muscular formulation is just as effective as the intra-articular, offering convenience as well as efficacy to your equine clients.

Further information is available from: Janssen Animal Health, PO Box 79, Saunderton, High Wycombe, Buckinghamshire HP14 4HJ. Tel: 01494 567555. Email: ahhealth@jacpb.jnj.com. Janssen Animal Health is a division of Janssen-Cilag Ltd.

Adequan contains polysulphated glycosaminoglycan 250mg/ml in 1ml ampoules for i/m injection; 1000mg/ml in 5ml ampoules for i/m injection. Legal category: **ECMV**.
